ISOBELLA GORDON | gordon.i@northeastern.edu

Role: Documentation & Preliminary Exploration

- **Lead Responsibilities:** State-of-the-art shell exploration report, team documentation, and comparative analysis.
- **Strengths:** Technical communication, research synthesis, and structured analysis of system behavior.
- **Project Goal:** Analyze existing shells and document empirical findings across workloads.
- **Would Like to Learn:** Shell internals and systems research writing.

PATRICK ARAUJO | araujo.pa@northeastern.edu

Role: Shell Implementation & Documentation

- **Lead Responsibilities:** Core POSIX shell execution engine, process APIs, pipes/redirection, and technical documentation.
- **Strengths:** Practical background in PC hardware and system building, which helps me understand how software interacts with real machines. Experienced with C and process APIs (fork, exec, wait, pipes) from previous assignments. Persistent, I keep working through problems until I understand them, even when they are hard.
- **Project Goal:** Build a working UNIX shell with job control, pipes, redirects, and a configurable scheduling policy.
- **Would Like to Learn:** How user-space scheduling works in practice, and how to measure and compare system performance across different policies.

XUEYAN ZHANG | zhang.xueya@northeastern.edu

Role: Architecture, Scheduler Implementation & Testing

- **Lead Responsibilities:** GitHub repository management, UML Sequence Diagrams (Critical Paths), scheduling policies, and experimental screenshots.
- **Strengths:** Data structures, algorithms, C programming, and benchmarking.
- **Project Goal:** Implement FIFO, SJF, Priority, and Adaptive scheduling policies and validate them under test workloads.
- **Would Like to Learn:** How schedulers work in real systems.
